SESSION DETAILS	AMOUNT
60 Minute Tutoring Session Tutor Notes: - Scarlett brought he guided notes packet from class and indicated she would be missing school from Wednesday until Sunday. - She is currently working on evaluating and graphing polynomials of nth degree. - For these questions she needs to find zeros, complex zeros, multiplicity, odd/even function, intervals where function is positive/negative, and sketching a graph given the previously mentioned features. - We skipped around quite a bit, but landed on some topics that needed more explanation: finding conjugates, connecting difference of two squares factoring to multiplying conjugates of complex numbers. We also completed every graphing question in her notes. - Overall, I think she is in good shape with the guided notes but will definitely benefit from more practice.	$80.00
TOTAL DUE	**$80.00**

THANK YOU
